

## Design Example Report

<b>Title</b>	<b><i>No Electrolytic Capacitor, High Efficiency (<math>\geq 90\%</math>), High Power Factor (<math>&gt; 0.9</math>) 15 W LED Driver Using LinkSwitch™-PH LNK417EG</i></b>
<b>Specification</b>	90 VAC – 265 VAC Input; 30 V, 500 mA Output
<b>Application</b>	LED Driver
<b>Author</b>	Applications Engineering Department
<b>Document Number</b>	DER-284
<b>Date</b>	July 14, 2015
<b>Revision</b>	1.3

### **Summary and Features**

- No electrolytic capacitors
- Clean monotonic start-up – no output blinking
- Fast start-up (<100 ms) – no perceptible delay
- Highly energy efficient
  - $\geq 90\%$  at 115 VAC and 230 VAC input
- Low cost, low component count and small printed circuit board footprint solution
  - No current sensing required
  - Frequency jitter for smaller, lower cost EMI filter components
- Integrated protection and reliability features
  - Output open-circuit / output short-circuit protected with auto-recovery
  - Line input overvoltage shutdown extends voltage withstand during line faults.
  - Auto-recovering thermal shutdown with large hysteresis protects both components and printed circuit board
  - No damage during brown-out or brown-in conditions
- Meets IEC 61000-4-5 ring wave, IEC 61000-3-2 Class C harmonics and EN55015 B conducted EMI

### **Power Integrations**

**Important Note:** Although this board is designed to satisfy safety isolation requirements, the engineering prototype has not been agency approved. Therefore, all testing should be performed using an isolation transformer to provide the AC input to the prototype board.

## 1 Introduction

This document describes an isolated, power factor corrected, very high efficiency LED driver designed to drive a 30 V LED string at a current of 500 mA (nominal). The input voltage range is 90 VAC to 265 VAC.

The LED driver uses a LNK417EG device from the LinkSwitch-PH family of ICs. This integrated controller and 725 V MOSFET dramatically reduces the complexity and component count of the solution.

The key design goals were to achieve the highest possible efficiency and eliminate electrolytic capacitors. Both are key factors for increasing the lifetime and reliability of LED drivers making this solution ideal for industrial and commercial applications.

This document contains the LED driver specification, schematic, bill of material, transformer documentation and typical performance characteristics.

### 3 Power Supply Specification

The table below represents the minimum acceptable performance of the design. Actual performance is listed in the results section.

Description	Symbol	Min	Typ	Max	Units	Comment
<b>Input</b>						
Voltage	$V_{IN}$	90	115	265	VAC	2 Wire – no P.E.
Frequency	$f_{LINE}$	47	50/60	64	Hz	
<b>Output</b>						
Output Voltage	$V_{OUT}$	27	30	33	V	
Output Current	$I_{OUT}$		0.50		A	
<b>Total Output Power</b>						
Continuous Output Power	$P_{OUT}$		15		W	
<b>Efficiency</b>						
Full Load	$\eta_{(115)}$ $\eta_{(230)}$	90 91				Measured at $P_{OUT}$ , 25 °C, 115 VAC Measured at $P_{OUT}$ , 25 °C, 230 VAC
<b>Environmental</b>						
Conducted EMI		Meets CISPR 15B / EN55015B				IEC 61000-4-5, 200 A
Safety		Designed to meet IEC950 / UL1950 Class II				
Ring Wave (100 kHz)						
Differential Mode (L1-L2) Common mode (L1/L2-PE)			2.5		kV	
Power Factor		0.9				Measured at $V_{OUT(TYP)}$ , $I_{OUT(TYP)}$ and 115/230 VAC
Harmonics		EN 61000-3-2 Class C				Class C Limits at $P_{IN} \leq 25$ W are Equal to Class D Limits.
Ambient Temperature <sup>a</sup>	$T_{AMB}$		40		°C	Free convection, sea level

Notes:

<sup>a</sup> Maximum ambient temperature specification may be increased by adding a small heat sink to the LinkSwitch-PH device.

### 4 Schematic

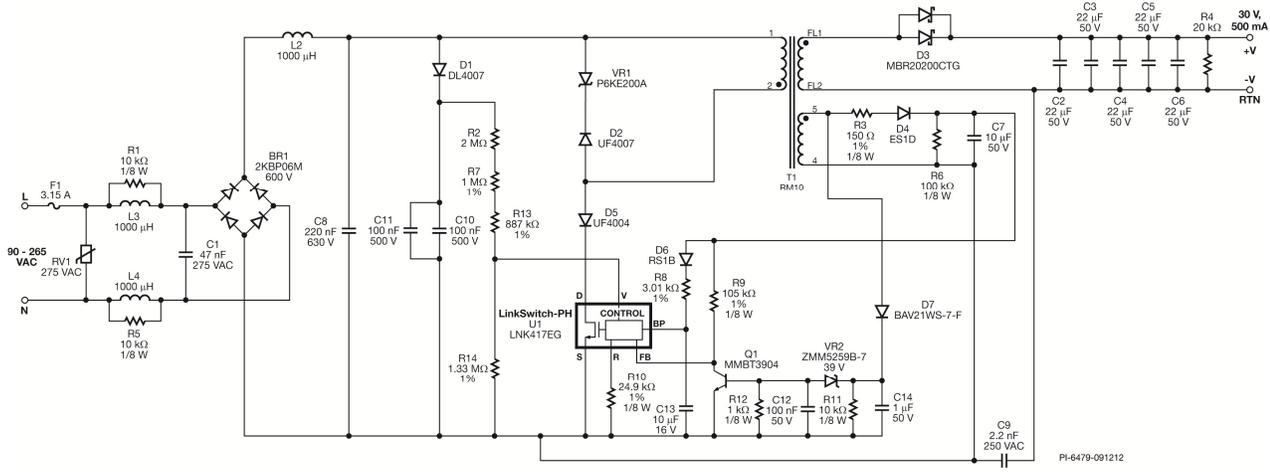

Figure 3 – Schematic.

### 5 PCB Layout

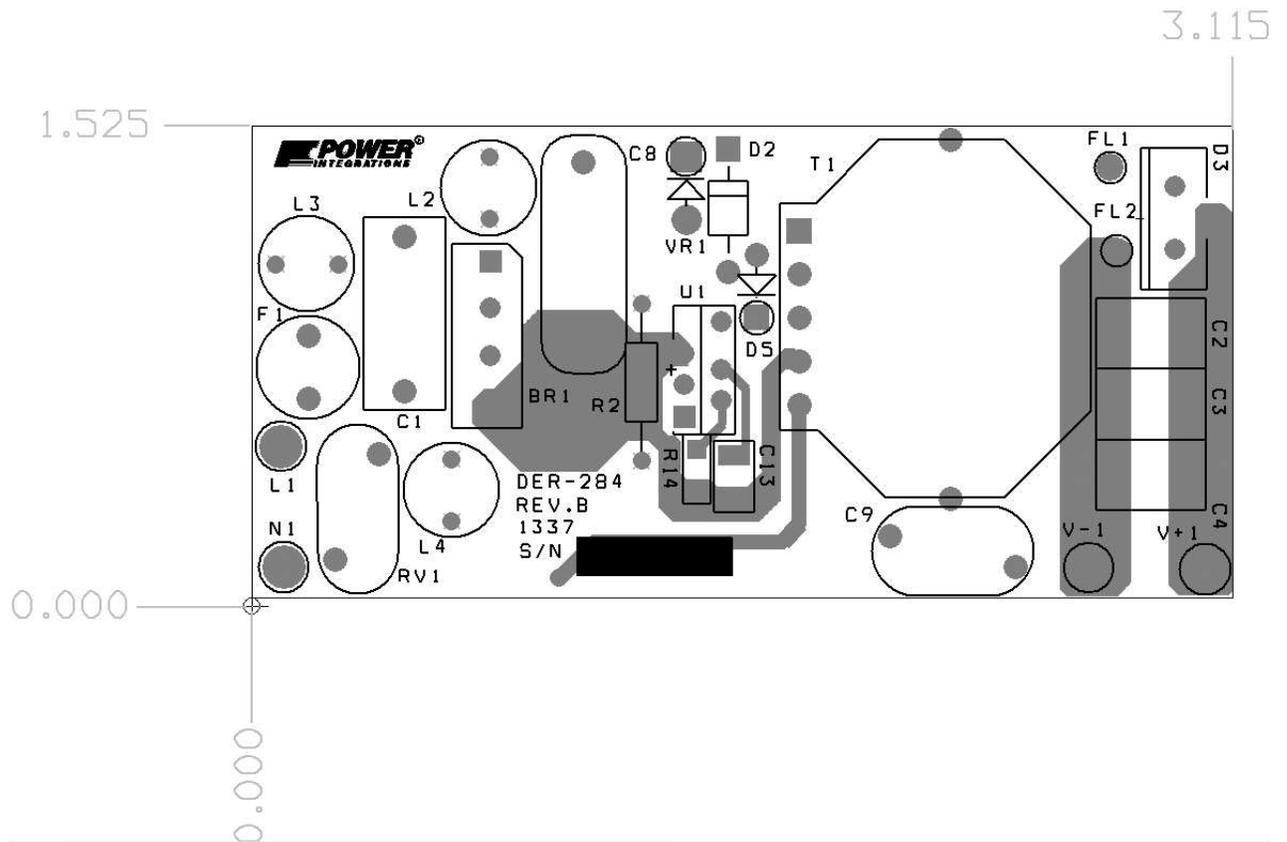

Figure 4 – Layout, Top Side.

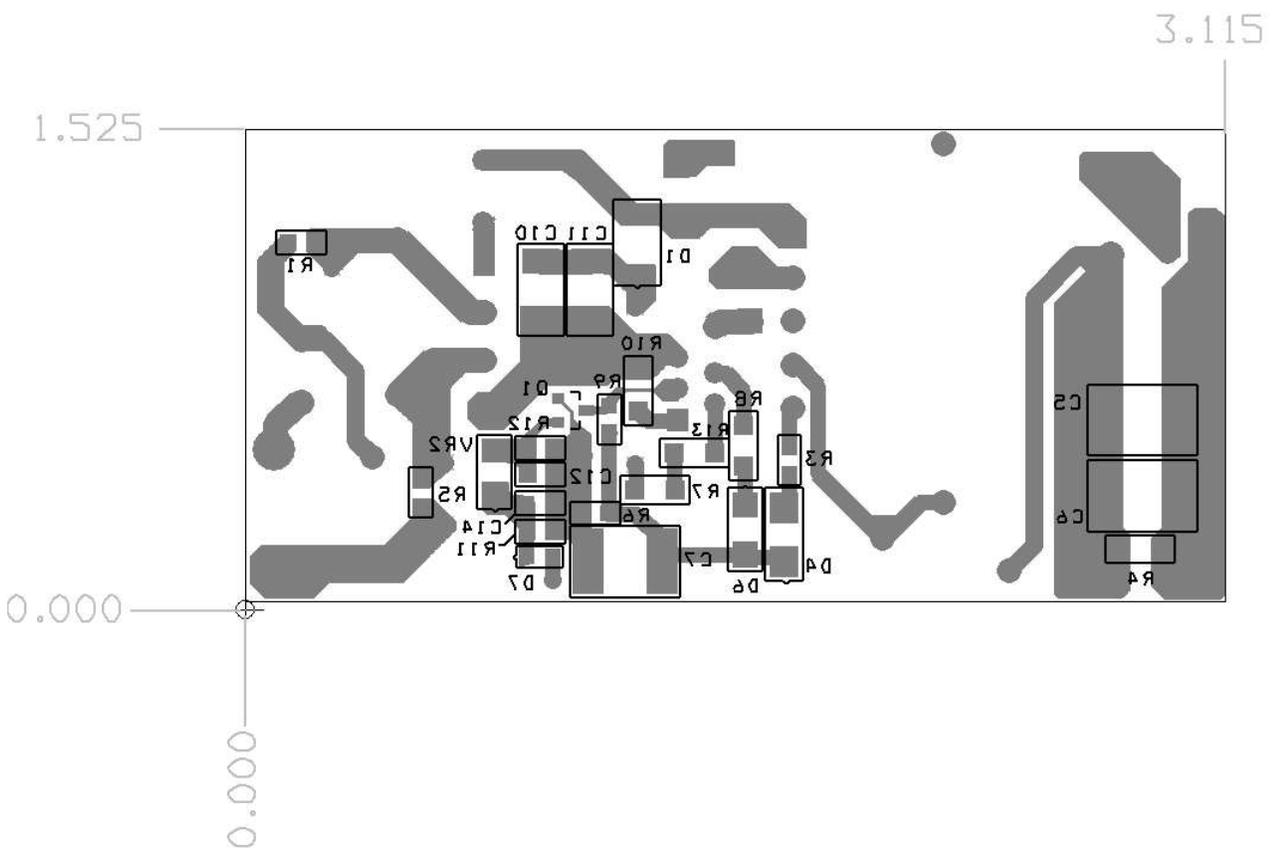

Figure 5 – Layout, Bottom Side.

## 6 Circuit Description

The LinkSwitch-PH device is a controller and integrated 725 V MOSFET intended for use in LED driver applications. The LinkSwitch-PH is configured for use in a single-stage continuous conduction mode flyback topology and provides a primary side regulated constant current output while maintaining high power factor from the AC input.

### 6.1 Input Filtering

Fuse F1 protects the input and BR1 rectifies the AC line voltage. Inductor L2-L4, C1, R1, and R5 form the EMI filter and together with C9 (Y1 safety) capacitor allow the design to meet EN55015B conducted EMI limits. Capacitor C8 provides a low impedance path for the primary switching current. A small capacitor value is necessary to maintain a power factor of greater than 0.9.

### 6.2 LinkSwitch-PH Primary

Diode D1 and high-voltage SMD ceramic capacitors C11 and C10 detect the peak AC line voltage. This voltage is converted to a current into the VOLTAGE MONITOR (V) pin via R2, R7 and R13. This current is also used by the device to set the input over/undervoltage protection thresholds. The V pin current and the FEEDBACK (FB) pin current are used internally to control the average output LED current. Non-dimming designs require 24.9 k $\Omega$  resistor on the REFERENCE (R) pin (R10) and 3.9 M $\Omega$  on the V pin (R2+R7+R13). Resistor R10 also selects the line undervoltage threshold. Resistor R14 was added to further improve line regulation, providing a constant output current over the specified input voltage range.

Diode D2 and VR1 clamp the drain voltage to below the  $BV_{DSS}$  rating (725 V) of the internal power MOSFET in U1. Diode D5 is necessary to prevent reverse current from flowing through the LinkSwitch-PH device (the result of the minimal input capacitance).

### 6.3 Bias Supply and Output Overvoltage Sensing

Diode D4, D6, C7, R3, R6 and R8 form the primary bias supply. This supplies the IC operating current into the BYPASS (BP) pin through D6 and R8 during normal operation. Resistor R3 provides filtering to improve output regulation while R6 acts as a minimum load.

Capacitor C13 provides decoupling for the LinkSwitch-PH. During start-up C13 is charged to  $\sim 6$  V from an internal high-voltage current source tied to the device DRAIN (D) pin. Once charged the energy stored in C13 is used to run the device until the output and bias winding voltage rise and current is supplied via R8.

A disconnected load / overvoltage shutdown function is provided by D7, C14, R11, VR2, C12, R12 and Q1. A separate bias winding output voltage is used to eliminate the delay introduced by the large value of C7 (compared to C14). Should the output LED load be

disconnected, the output voltage (and therefore the bias winding voltage across C14) will rise. Once this exceeds the voltage rating of VR2 plus the  $V_{BE}$  of Q1 then Q1 is biased on which pulls the FB pin down. Once the current into the FB pin of U1 falls below  $I_{FB(AR)}$  the device enters auto-restart, limiting the output voltage. Resistor R11, C12 provide filtering and R12 defines the Zener current at the point Q1 turns on.

#### **6.4 Output Feedback**

A current proportional to the output voltage from the primary bias winding is fed into the FB pin through R9. This information together with the line input voltage and the drain current are used to maintain a constant output current.

#### **6.5 Output Rectification and Filtering**

Diode D3 rectifies the secondary winding while ceramic capacitors C2, C3, C4, C5 and C6 filter the output. A 20 A, 200 V Schottky diode was selected for high efficiency. Resistor R4 provides a minimum load to ensure the LED light output falls to zero when the AC is removed.

#### **6.6 Considerations for Higher Efficiency**

The following changes were made over the standard RD-195 to achieve higher efficiency.

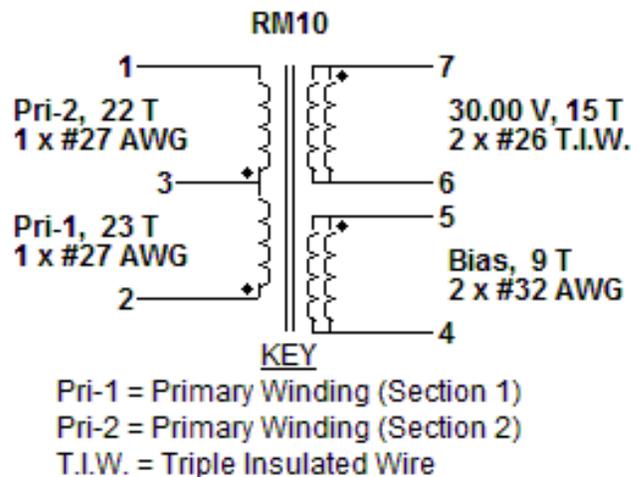

- Larger LinkSwitch-PH device (LNK417EG vs. LNK416EG).
- 20 A vs. 4 A Schottky output diode
- Larger RM10 core size vs. RM8 to allow lower winding current density (and lower winding losses).

## 8 Transformer Specification

### 8.1 Electrical Diagram

**Figure 6** – Transformer Electrical Diagram.

### 8.2 Electrical Specifications

<b>Electrical Strength</b>	1 second, 60 Hz, from pins 1, 2, 3, 4, 5 to pins FL1, FL2.	3000 VAC
<b>Primary Inductance</b>	Measured at 1 V pk-pk, typical switching frequency, between pin 1 to pin 2, with all other windings open.	1.6 mH ±10%
<b>Resonant Frequency</b>	Pins 1- 2, all other windings open.	750 kHz (Min.)
<b>Primary Leakage Inductance</b>	Measured between pin 1 to pin 2, with all other windings shorted.	40 μH ±10%

### 8.3 Materials

Item	Description
[1]	Core: PC95RM10Z-12 or Equivalent, gapped for ALG of 792 nH/t <sup>2</sup> .
[2]	Bobbin: Generic, 5 primary + 0 secondary.
[3]	Barrier Tape: Polyester film [1 mil (25 μm) base thickness], 10.00 mm wide.
[4]	Separation Tape: Polyester film [1 mil (25 μm) base thickness], 10.0 mm wide.
[5]	Varnish.
[6]	Magnet Wire: #27 AWG, Solderable Double Coated.
[7]	Triple Insulated Wire: #26 AWG.
[8]	Magnet Wire: #32 AWG, Solderable Double Coated.
[9]	Clip: CLI/P-RM10/I.

### 8.4 Transformer Build Diagram

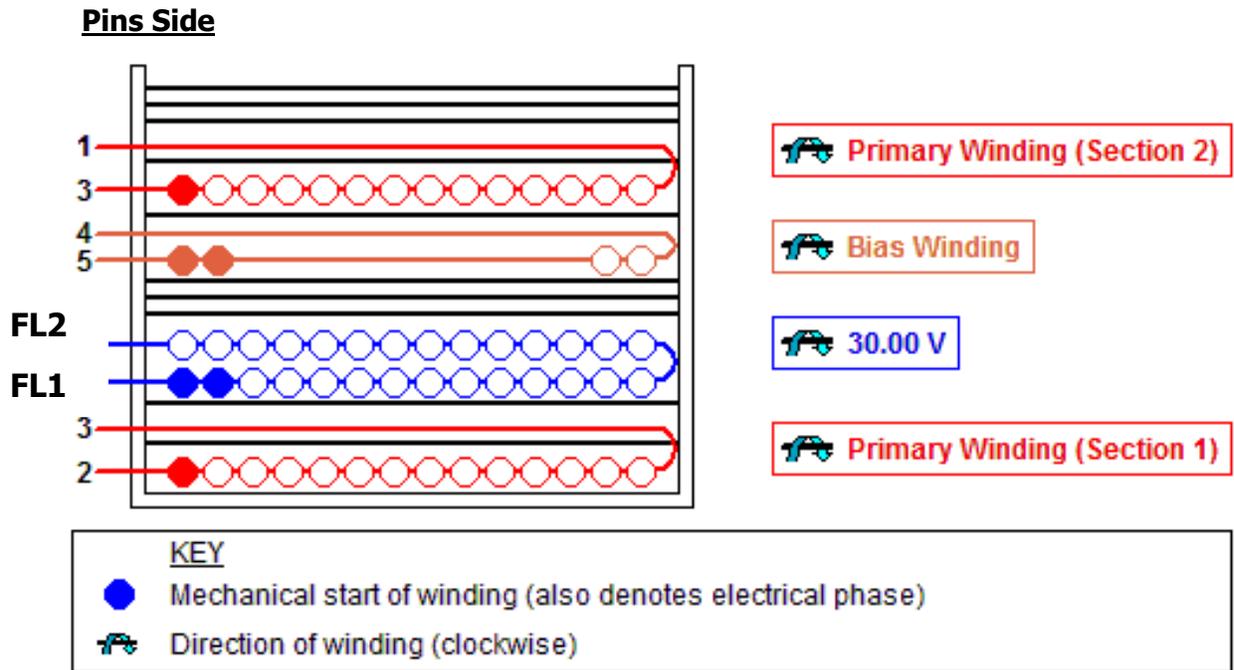

Figure 7 – Transformer Build Diagram.

### 8.5 Transformer Construction

<b>Bobbin Preparation</b>	Place the bobbin item [2] on the mandrel such that pin side on the left side. Winding direction is the clockwise direction.
<b>Primary Winding 1</b>	Start on pin 2 and wind 23 turns (x1 filar) of item [6] in 1 layer(s) from left to right. Add 1 layer of tape, item [4], in between each primary winding layer. On the final layer, spread the winding evenly across entire bobbin. Finish this winding on pin 3.
<b>Insulation</b>	Add 1 layer of tape, item [3], for insulation.
<b>Secondary Winding</b>	Start on pin FL1 and wind 15 turns (x2 filar) of item [7]. Spread the winding evenly across entire bobbin. Wind in same rotational direction as primary winding. Finish this winding on pin FL2.
<b>Insulation</b>	Add 3 layers of tape, item [3], for insulation.
<b>Bias Winding</b>	Start on pin 5 and wind 9 turns (x2 filar) of item [8]. Wind in same rotational direction as primary winding. Spread the winding evenly across entire bobbin. Finish this winding on pin(s) 4.
<b>Insulation</b>	Add 1 layer of tape, item [3], for insulation.
<b>Primary Winding 2</b>	Start on pin 3 and wind 22 turns (x1 filar) of item [6] in 1 layer(s) from left to right. Add 1 layer of tape, item [4], in between each primary winding layer. On the final layer, spread the winding evenly across entire bobbin. Finish this winding on pin 1.
<b>Insulation</b>	Add 3 layers of tape, item [3], for insulation.
<b>Final Assembly</b>	Assemble and secure core halves. Item [1] with Item [9]. Dip varnish uniformly in item [5]. Do not vacuum impregnate.

### 10.2 Efficiency

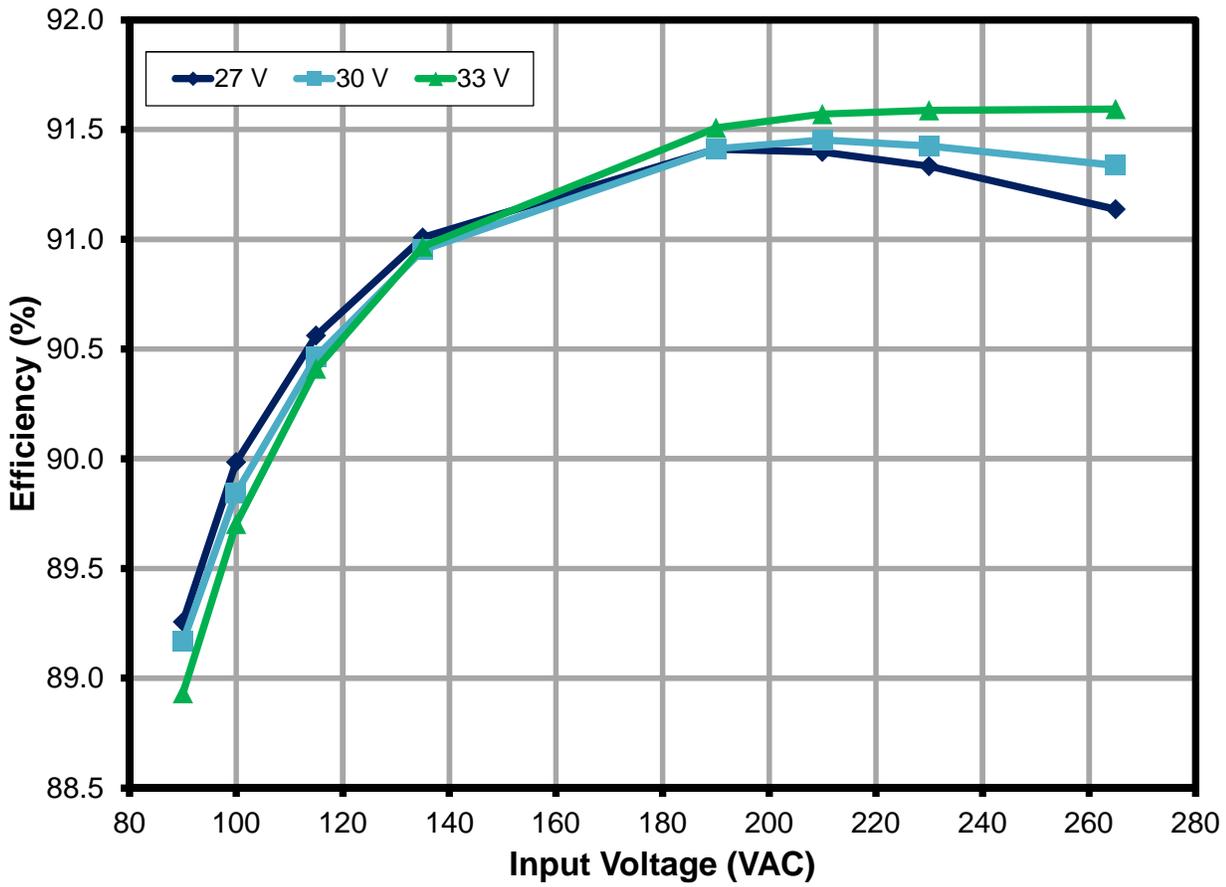

Figure 8 – Efficiency vs. Input Voltage, Room Temperature.

### 10.3 Regulation

#### 10.3.1 Line Regulation

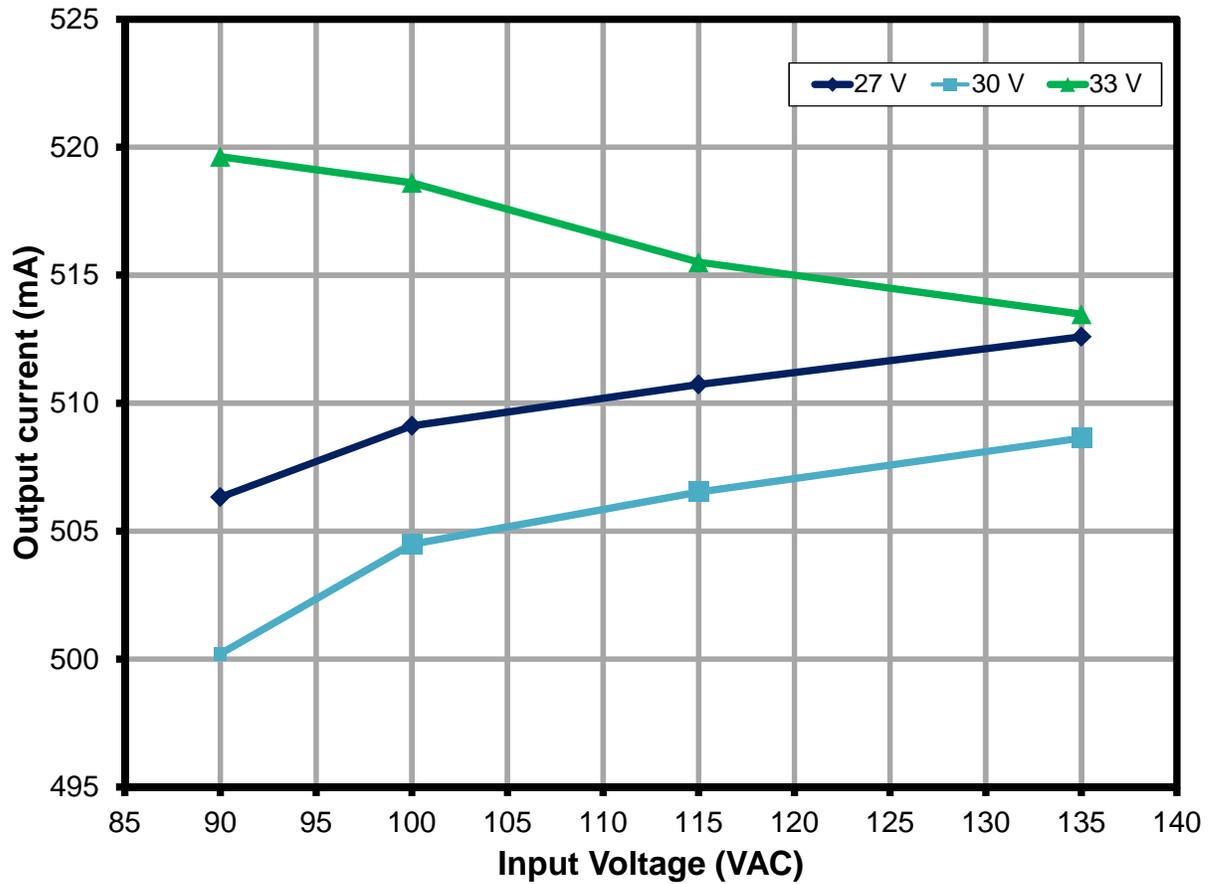

Figure 9 – Low-Line Regulation, Room Temperature, Full Load.

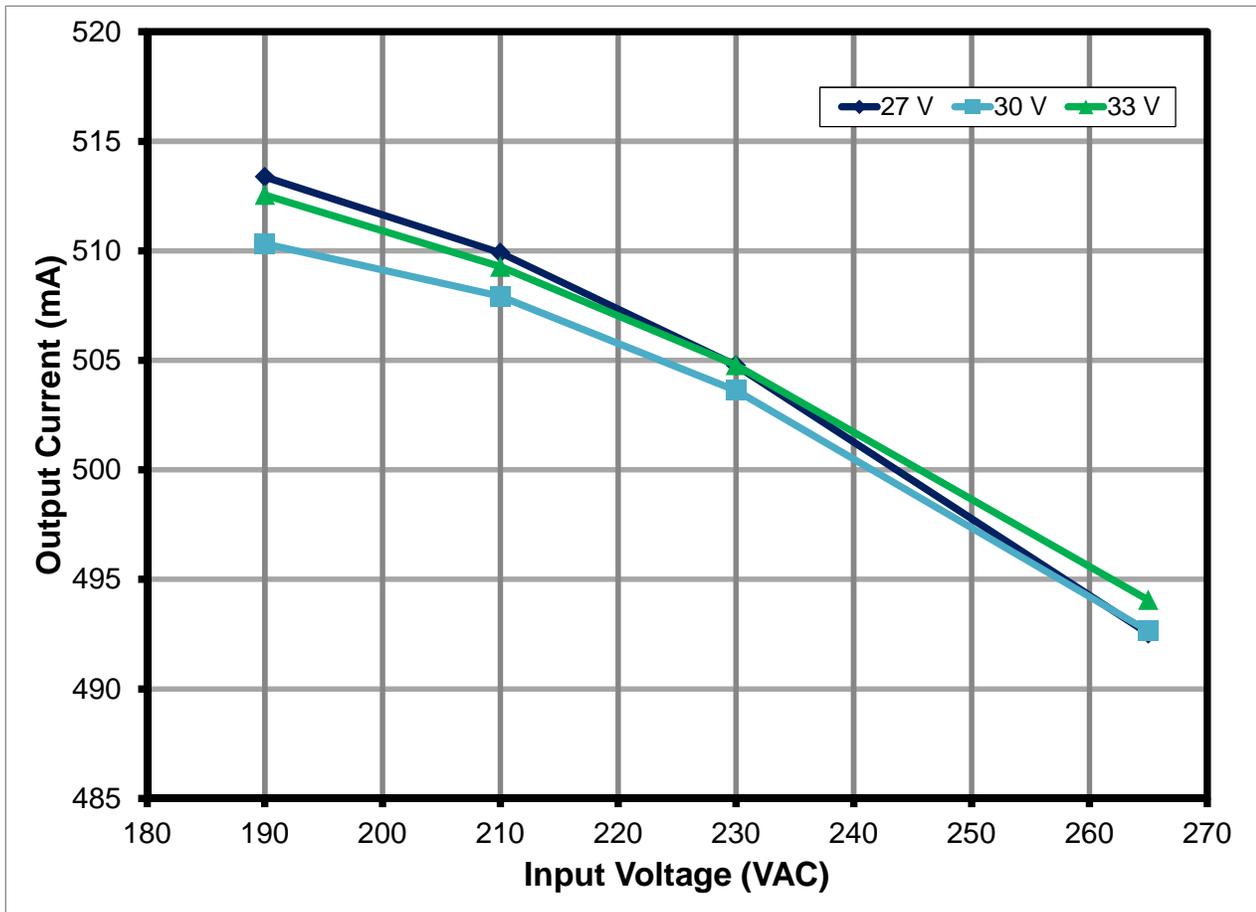

Figure 10 – High-Line Regulation, Room Temperature, Full Load.

## 11 Thermal Performance

Images captured after running for 30 minutes at room temperature (25 °C), full load (30 V, 500 mA). Hottest component is U1, which provides system thermal protection via internal hysteretic thermal shutdown.

### 11.1 $V_{IN} = 115 \text{ VAC}$

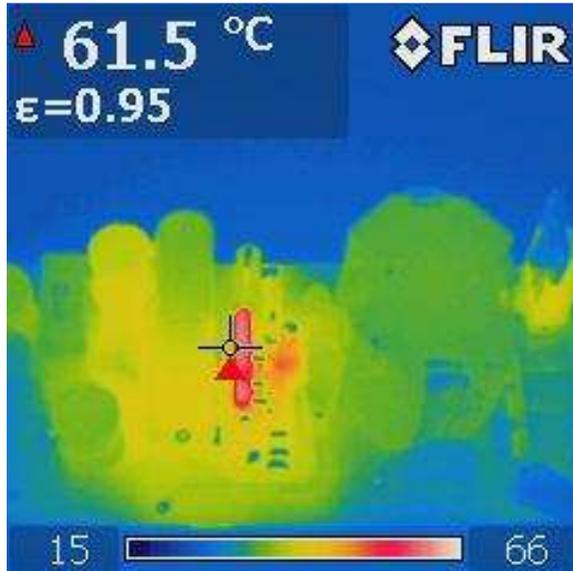

Figure 11 – Top Side.

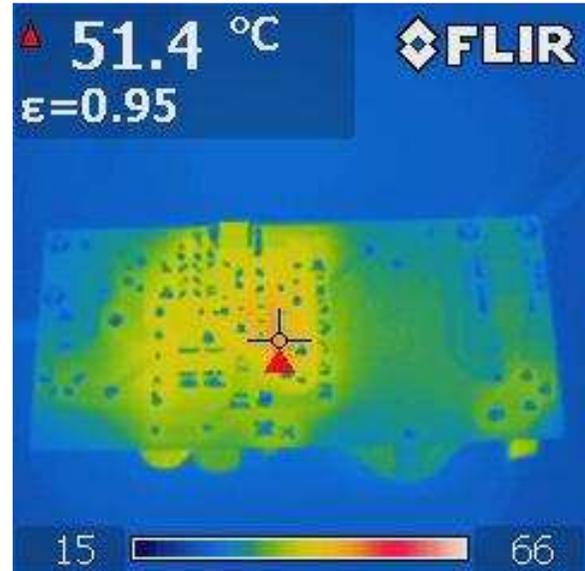

Figure 12 – Bottom Side.

### 11.2 $V_{IN} = 230 \text{ VAC}$

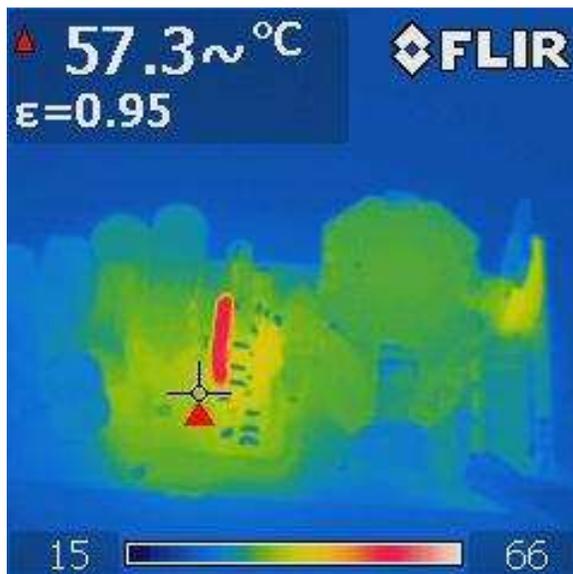

Figure 13 – Top Side.

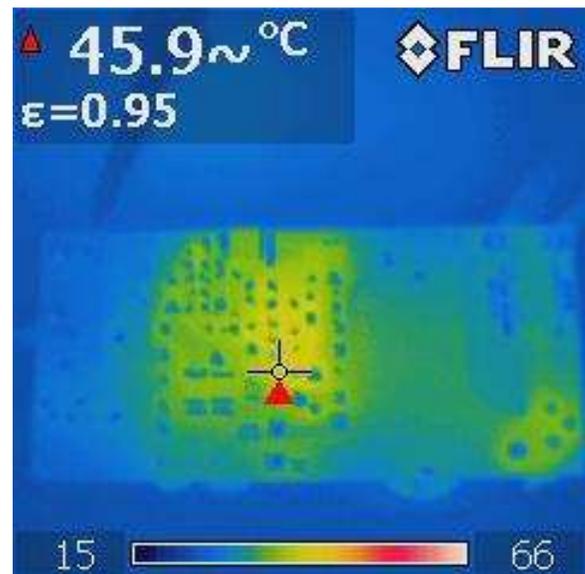

Figure 14 – Bottom Side.

## 12 Harmonic Current, PF and THD Data

### 12.1 Harmonic Current

The design passes Class C requirement.

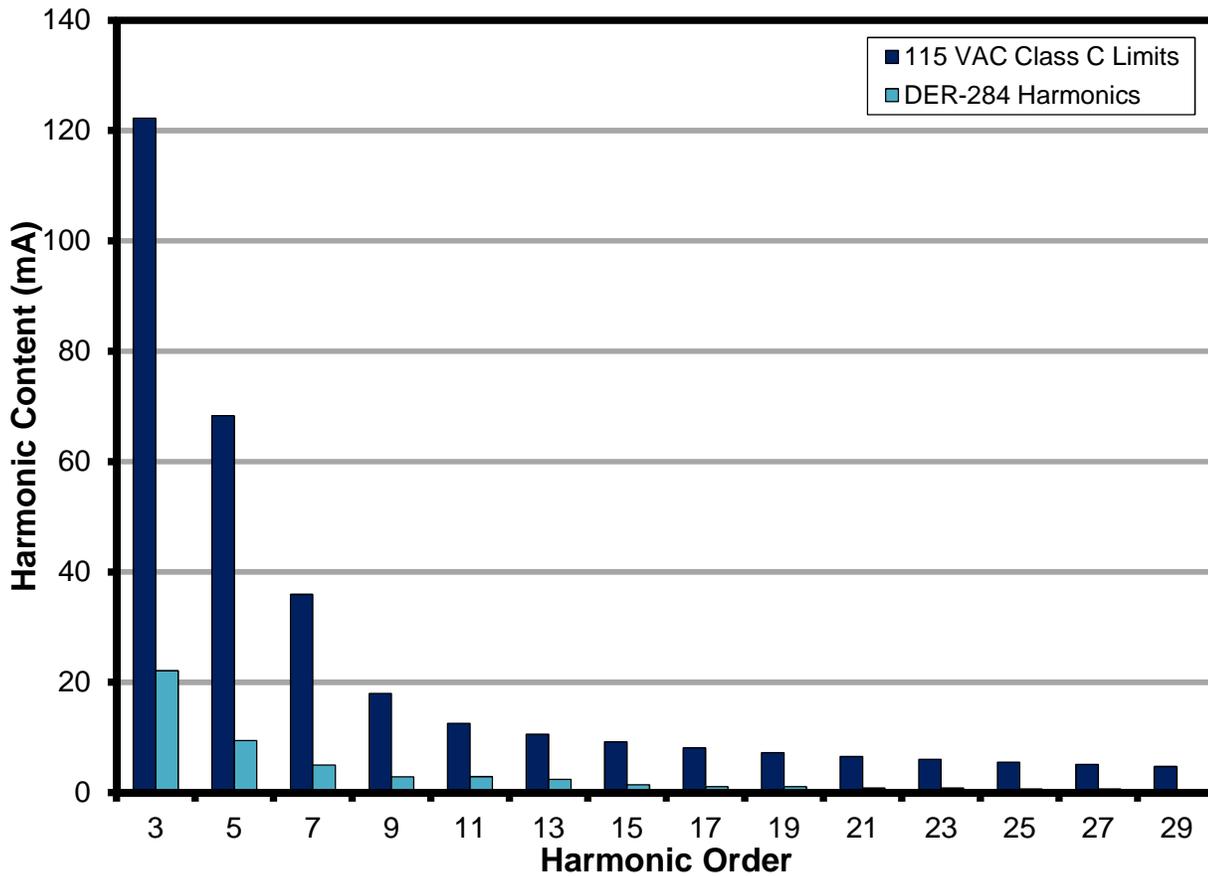

Figure 15 – 115 VAC Harmonic, Room Temperature, Full Load.

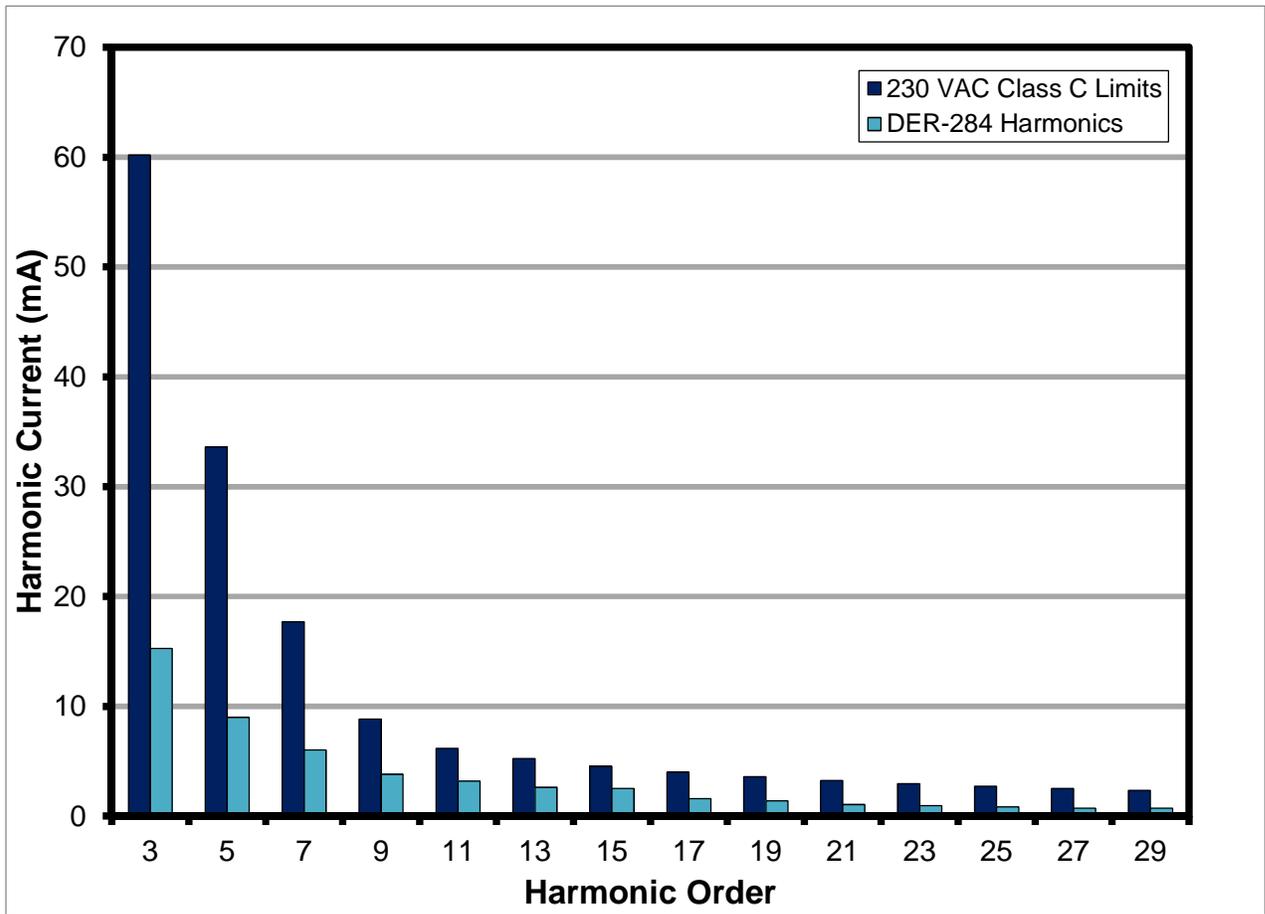

Figure 16 – 230 VAC Harmonic, Room Temperature, Full Load.

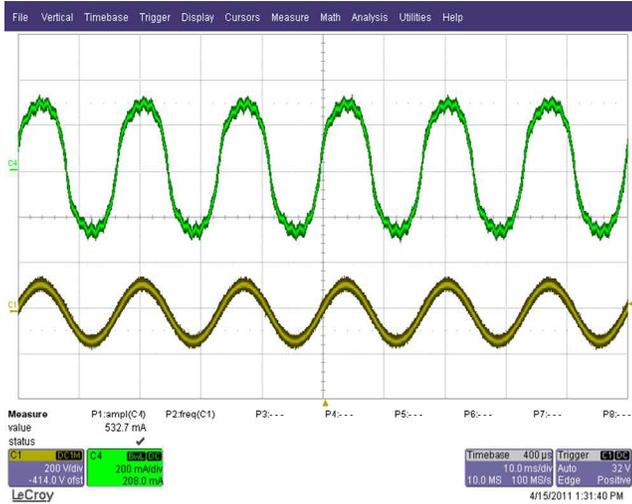

**12.2 PF and THD Data**

Input Voltage (VAC)	Power Factor	I <sub>THD</sub> (%)
112	0.99	16
230	0.96	26

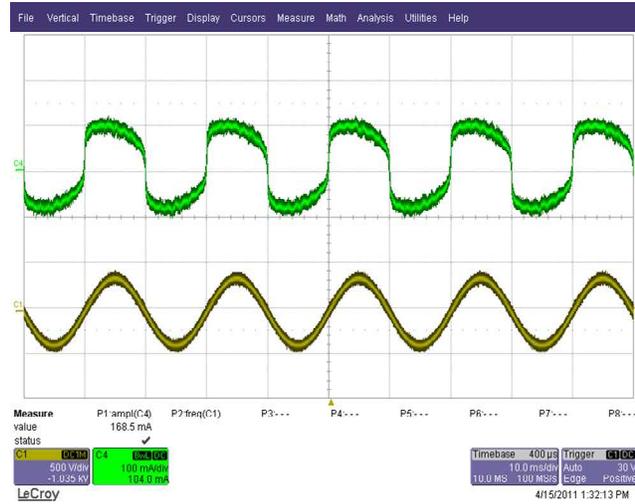

### 13 Waveforms

#### 13.1 Input Line Voltage and Current

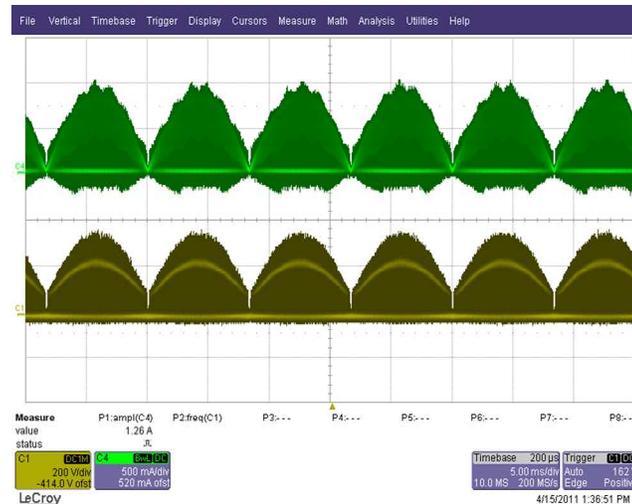

**Figure 17** – 90 VAC, Full Load.  
 Upper:  $I_{IN}$ , 0.2 A / div.  
 Lower:  $V_{IN}$ , 200 V, 10 ms / div.

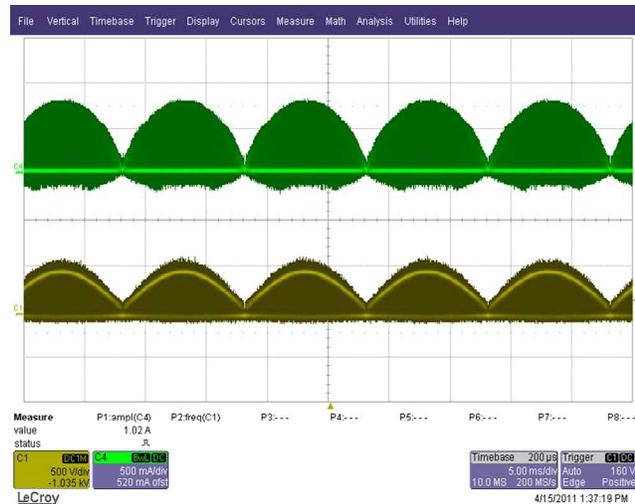

**Figure 18** – 265 VAC, Full Load.  
 Upper:  $I_{IN}$ , 0.1 A / div.  
 Lower:  $V_{IN}$ , 500 V / div., 10 ms / div.

#### 13.2 Drain Voltage and Current

**Figure 19** – 90 VAC, Full Load.  
 Upper:  $I_{DRAIN}$ , 0.5 A / div.  
 Lower:  $V_{DRAIN}$ , 200 V, 5 ms / div.

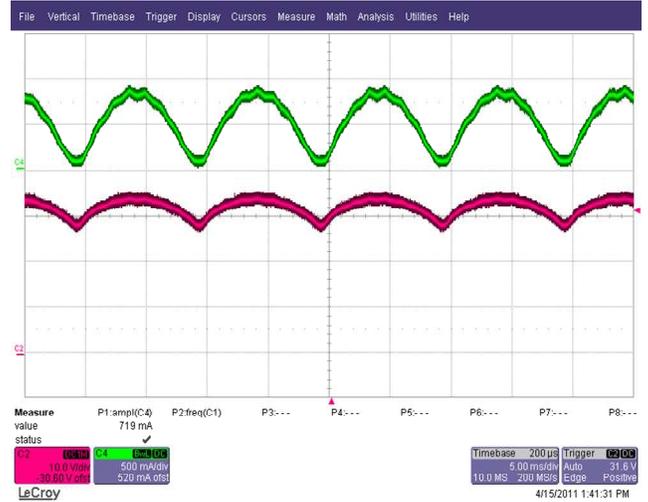

**Figure 20** – 265 VAC, Full Load.  
 Upper:  $I_{DRAIN}$ , 0.5 A / div.  
 Lower:  $V_{DRAIN}$ , 500 V / div., 5 ms / div.

### 13.3 Output Voltage and Ripple Current

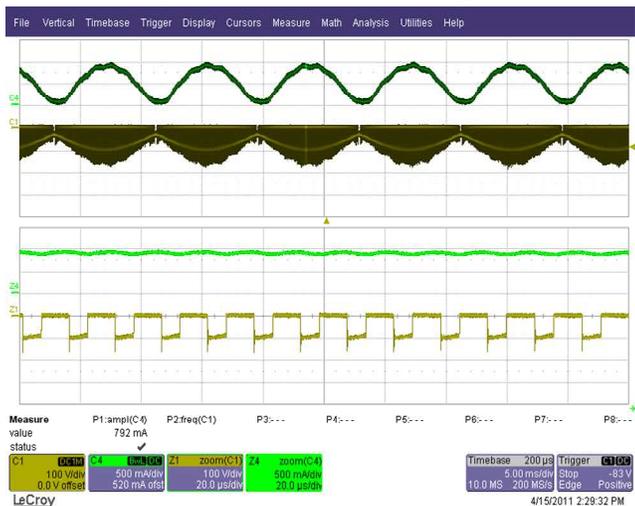

**Figure 21** – 90 VAC, Full Load.  
 Upper:  $I_{RIPPLE}$ , 0.5 A / div.  
 Lower:  $V_{OUT}$ , 10 V, 5 ms / div.

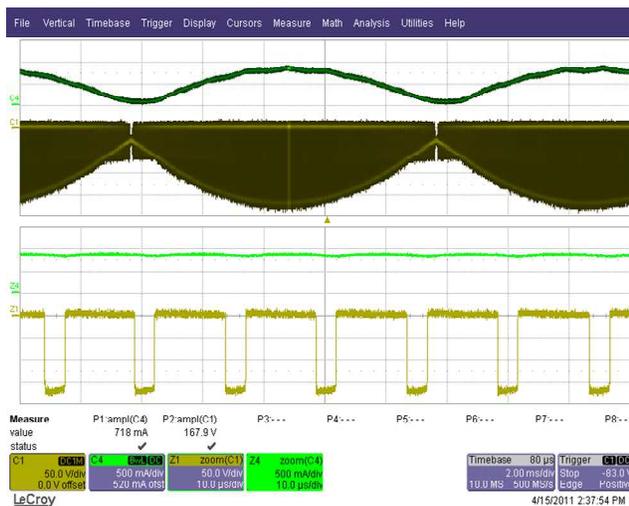

**Figure 22** – 265 VAC, Full Load.  
 Upper:  $I_{RIPPLE}$ , 0.5 A / div.  
 Lower:  $V_{OUT}$ , 10 V, 5 ms / div.

### 13.4 Output Rectifier Voltage and Current

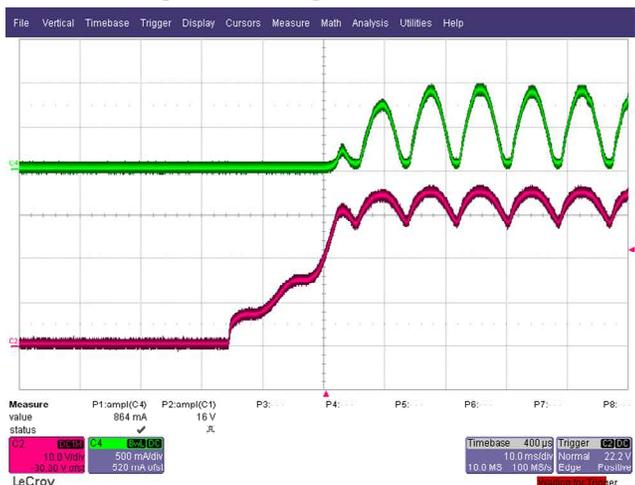

**Figure 23 – 110 VAC, Full Load.**  
 Upper:  $I_{RIPPLE}$ , 0.5 A / div.  
 Lower:  $V_{DIODE}$ , 100 V, 5 ms/200  $\mu$ s / div.

**Figure 24 – 265 VAC, Full Load.**  
 Upper:  $I_{RIPPLE}$ , 0.5 A / div.  
 Lower:  $V_{DIODE}$ , 50 V, 5 ms/200  $\mu$ s / div.

### 13.5 Output Voltage and Current Start-up Profile

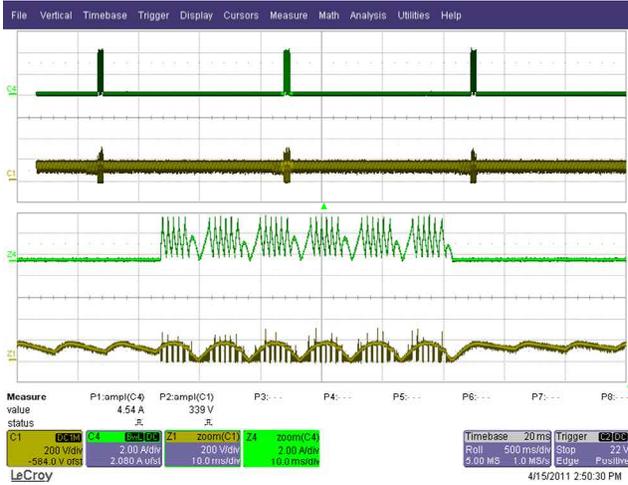

**Figure 25 – 110 VAC, Full Load.**  
 Upper:  $I_{OUT}$ , 0.5 A / div.  
 Lower:  $V_{OUT}$ , 10 V, 10 ms / div.

**Figure 26 – 230 VAC, Full Load.**  
 Upper:  $I_{OUT}$ , 0.5 A / div.  
 Lower:  $V_{OUT}$ , 10 V, 10 ms / div.

### 13.6 Output Current and Drain Voltage with Shorted Output

**Figure 27** – 90 VAC, Full Load.  
 Upper:  $I_{OUT}$ , 2 A / div.  
 Lower:  $V_{DRAIN}$ , 200 V, 500 ms / div.

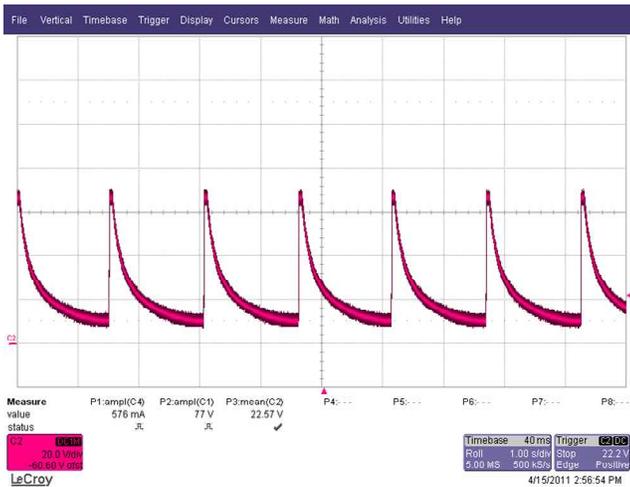

**Figure 28** – 265 VAC, Full Load.  
 Upper:  $I_{OUT}$ , 2 A / div.  
 Lower:  $V_{DRAIN}$ , 200 V, 500 ms / div.

### 13.7 Output Current and Output Voltage with Shorted Output

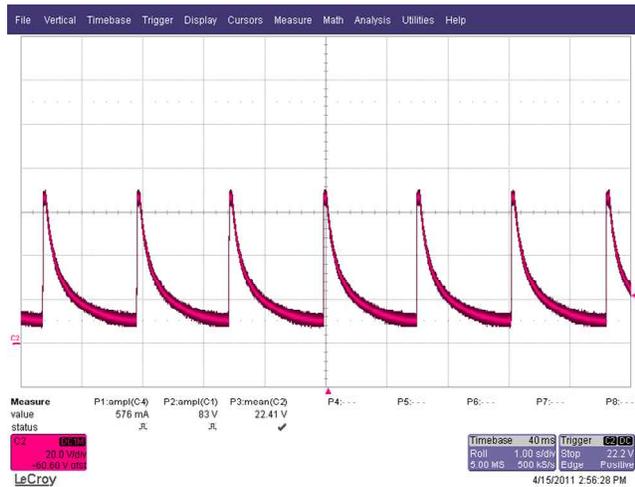

**Figure 29** – 110 VAC, Full Load.  
 Upper:  $I_{OUT}$ , 1 A / div.  
 Lower:  $V_{DRAIN}$ , 10 V, 1 s / div.

### 13.8 Open Load Output Voltage

**Figure 30** – Output Voltage: 110 VAC.  
 $V_{OUT}$ , 20 V / div., 1 s / div.

**Figure 31** – Output Voltage: 230 VAC.  
 $V_{OUT}$ , 20 V / div., 1 s / div.

**Note:** Under open load conditions the OV shutdown function is designed to prevent the output voltage exceeding SELV limits (45 V). This is achieved, however the voltage rating of the output capacitors is exceeded which is acceptable for a fault condition.

## 14 Line Surge

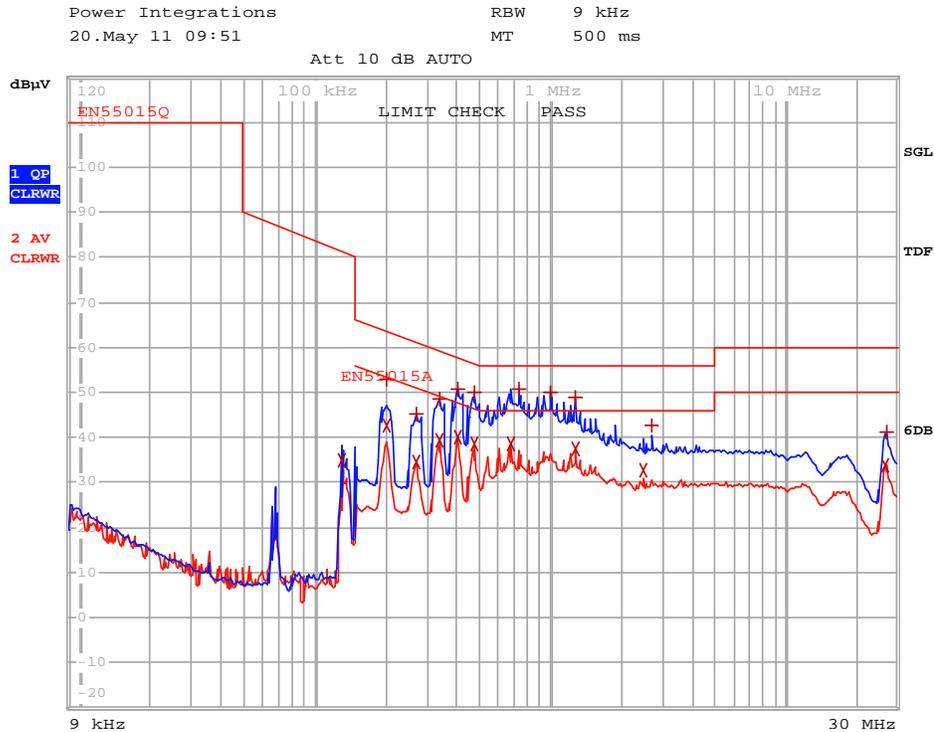

Differential and common input line 200 A ring wave testing was completed on a single test unit to IEC61000-4-5. Input voltage was set at 230 VAC / 60 Hz. Output was loaded at full load and operation was verified following each surge event.

Surge Level (V)	Input Voltage (VAC)	Injection Location	Injection Phase (°)	Test Result (Pass/Fail)
2500	230	L to N	90	Pass
2500	230	L to N	90	Pass
2500	230	L to PE	90	Pass
2500	230	L to PE	90	Pass
2500	230	N to PE	90	Pass
2500	230	N to PE	90	Pass

Unit passes under all test conditions.

### 15 Conducted EMI

Note: Refer to table for margin to standard – blue line is peak measurement but limit line is quasi peak.

## 16 Revision History

Date	Author	Revision	Description and Changes	Reviewed
08-Jul-11	DK	1.0	Initial Release.	Apps and Mktg
30-Aug-12	DK	1.1	Corrected errors on transformer pin numbering.	
18-Sep-13	KM	1.2	PCB updated to Rev B to fix Q1.	
14-Jul-15	KM	1.3	Updated brand style and added transformer supplier.
