

## Design Example Report

<b>Title</b>	<b><i>175 mW Constant Voltage, Universal Input, Non-Isolated Buck Converter Using LinkSwitch™-TN2 LNK3202D</i></b>
<b>Specification</b>	85 VAC – 265 VAC Input; 5.0 V, 35 mA Output
<b>Application</b>	Small Appliance
<b>Author</b>	Applications Engineering Department
<b>Document Number</b>	DER-507
<b>Date</b>	November 8, 2016
<b>Revision</b>	1.0

### **Summary and Features**

- Lowest cost and component count Buck-converter solution
- Excellent output voltage load regulation (<5% 5 V<sub>TYP</sub>)
- Excellent output voltage line regulation (<2% 5 V<sub>TYP</sub>)
- Programmable current limit enables selection of inductor with low current rating
- Reduced dissipation during output short circuit fault
- Low no-load input power, <120 mW
- Low output voltage ripple <100 mV<sub>PK-PK</sub>
- > 5 dB conducted EMI margin

### **PATENT INFORMATION**

The products and applications illustrated herein (including transformer construction and circuits external to the products) may be covered by one or more U.S. and foreign patents, or potentially by pending U.S. and foreign patent applications assigned to Power Integrations. A complete list of Power Integrations' patents may be found at [www.powerint.com](http://www.powerint.com). Power Integrations grants its customers a license under certain patent rights as set forth at <<http://www.powerint.com/ip.htm>>.

**Important Note:**

Although this board is designed to satisfy safety isolation requirements, the engineering prototype has not been agency approved. Therefore, all testing should be performed using an isolation transformer to provide the AC input to the prototype board.

## 1 Introduction

This engineering report describes a buck converter power supply designed to provide a nominal output voltage of 5 V at 35 mA load from a wide input voltage range of 85 VAC to 265 VAC. It utilizes the LNK3202D from the LinkSwitch™-TN2 family of devices.

The LinkSwitch-TN2 ICs are specifically designed to replace all linear and capacitor-fed (cap dropper) non-isolated power supplies in the under 360 mA output current range at equal system cost while offering much higher performance and energy efficiency.

The DER-507 provides a single 5 V buck output. The key design goal is a low cost solution intended for adapter applications.

The document contains the power supply specification, schematic, bill of materials, transformer documentation, printed circuit layout, performance and test data.

## 2 Power Supply Specification

The table below represents the minimum acceptable performance of the design. Actual performance is listed in the results section.

Description	Symbol	Min	Typ	Max	Units	Comment
<b>Input</b>						
Voltage	<b>V<sub>IN</sub></b>	85		265	VAC	
Frequency	<b>f<sub>LINE</sub></b>	47	50/60	63	Hz	
No-load Input Power				120	mW	2 Wire – no P.E.
<b>Output</b>						
Output Voltage	<b>V<sub>OUT</sub></b>	4.75		5.25	V	
Output Current	<b>I<sub>OUT</sub></b>		35		mA	
Output Ripple Voltage	<b>V<sub>RIPPLE</sub></b>			100	mV	Output Ripple Voltage Measured at the Board Output Terminals.
Rated Output Power	<b>P<sub>OUT</sub></b>		175		mW	
<b>Efficiency</b>						
Full Load	<b>η</b>	45%				With rated full load
<b>Environmental</b>						
Conducted EMI			CISPR22B / EN55022B Load Floating			>5 dB Margin Using Resistive Load.
Line Surge				1	kV	
Differential mode (L1/N)						Differential: 2 Ω.
<b>Ambient Temperature</b>	<b>T<sub>AMB</sub></b>	0		40	°C	Free Convection, Sea Level

### 3 Schematic

**Figure 3 – Schematic.**

## 4 Circuit Description

### 4.1 ***Input Stage***

Fusible resistor RF1 provides protection against component short circuit failure drawing large current from the input. Half-wave rectified input to LinkSwitch-TN2 IC is provided by D1.

### 4.2 ***EMI Filters***

The resistors R1, R2 together with the input filter capacitor C1, work as an EMI filter. These EMI filters ensure compliance with the EN55022 Class B emission limit.

### 4.3 ***LinkSwitch-TN2 Circuit Operation***

The controller IC, U1, is configured as a high-side buck switch regulator. IC U1, inductor L1, capacitor C5 and diode D2 form the buck converter.

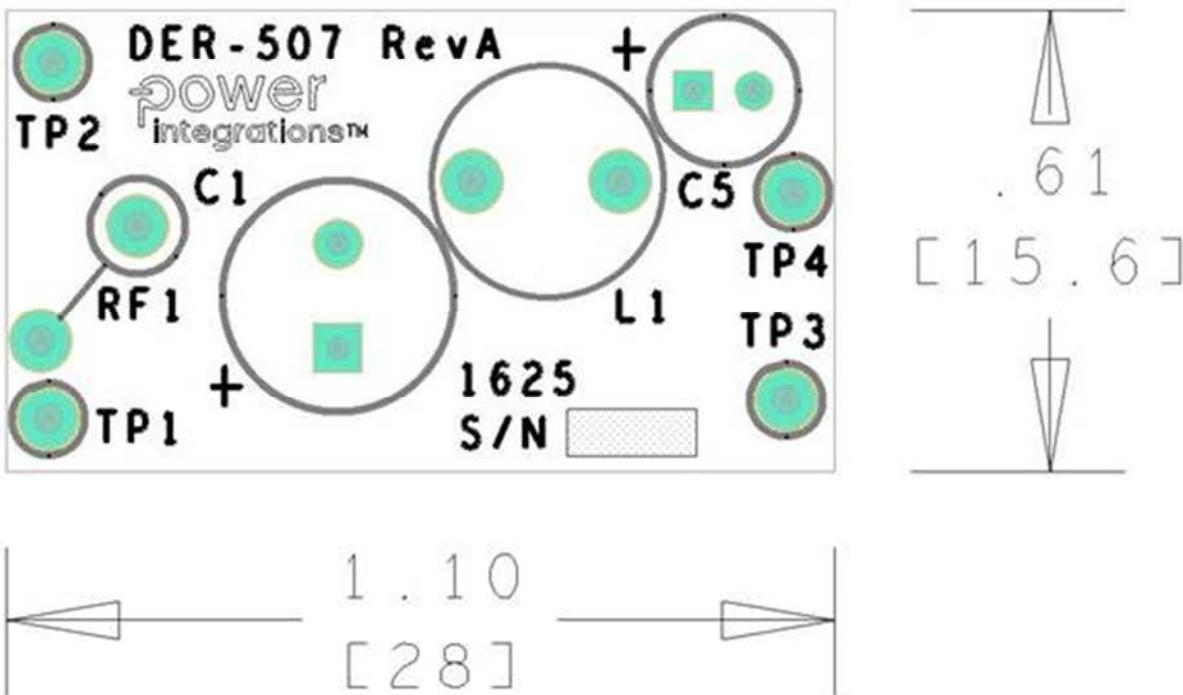

During normal operation, the IC is powered by the DRAIN (D) pin and charges the BP-pin capacitor C2. This BP-pin capacitor sets the programmable current limit. IC U1 uses ON-OFF control to regulate the output voltage. When the MOSFET inside IC U1 turns OFF, freewheeling diode D2 conducts. When the diode D2 conducts, voltage across inductor L1 is the sum of output voltage and the diode drop of D2. This voltage is impressed at the input of the rectifier and filter stage comprising of diode D3 and capacitor C4. With the voltage drops of diodes D2 and D3 approximately the same, the voltage across capacitor C4 tracks the voltage across output capacitor C5.

Output voltage is sampled by the FEEDBACK (FB) pin through the feedback resistors R3 and R4 by sampling the voltage across capacitor C4 which is the direct representation of the output voltage.

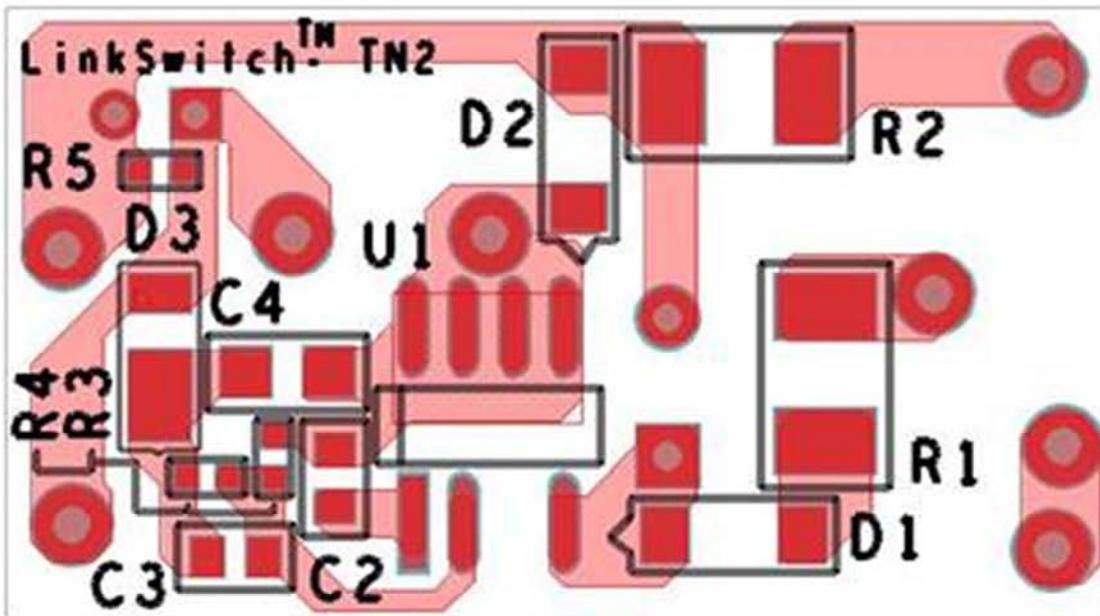

Resistor R5 acts as a pre-load to control the output voltage during no-load condition. Increasing the value of this resistor can help to reduce the no-load power consumption however it also leads to higher voltage regulation at no-load.

<b>ENTER APPLICATION VARIABLES</b>					
LINE VOLTAGE RANGE			Universal		AC line voltage range
VACMIN			85.00	volts AC	Minimum AC line voltage
VACTYP			115.00	volts AC	Typical AC line voltage
VACMAX			265.00	volts AC	Maximum AC line voltage
fL			50.00	Hz	AC mains frequency
LINE RECTIFICATION TYPE	H		H		Select 'F'ull wave rectification or 'H'alf wave rectification
VOUT	5.00		5.00	volts DC	Output voltage
IOUT	0.035		0.035	A	Average output current
EFFICIENCY	0.47		0.47		Efficiency estimate at output terminals
POUT			0.18	W	Continuous Output Power
CIN	2.20		2.20	uF	Input capacitor
VMIN			93.2	volts DC	Valley of the rectified input voltage
<b>ENTER LINKSWITCH-TN2 VARIABLES</b>					
OPERATION MODE			MDCM		Mostly discontinuous mode of operation
CURRENT LIMIT MODE	RED		RED		Choose 'RED' for reduced current limit or 'STD' for standard current limit
PACKAGE	SO-8C		SO-8C		Select the device package
DEVICE SERIES	LNK32X2		LNK32X2		Generic LinkSwitch-TN2 device
DEVICE CODE			LNK3202		Required LinkSwitch-TN2 device
ILIMITMIN			0.070	A	Minimum current limit of the device
ILIMITYTYP			0.080	A	Typical current limit of the device
ILIMITMAX			0.090	A	Maximum current limit of the device
RDSON			88.40	ohms	MOSFET's on-time drain to source resistance at 100degC
FSMIN			62000	Hz	Minimum switching frequency
FSTYP			68000	Hz	Typical switching frequency
FSMAX			72000	Hz	Maximum switching frequency
VDSON			2.00	volts DC	MOSFET on-time drain to source voltage estimate
DUTY			0.15		Maximum duty cycle
TIME_ON			2.411	us	MOSFET conduction time at the minimum line voltage
TIME_ON_MIN			0.714	us	MOSFET conduction time at the maximum line voltage
IRMS_MOSFET			0.016	A	MOSFET RMS current
<b>BUCK INDUCTOR PARAMETERS</b>					
INDUCTANCE_MIN			2970	uH	Minimum design inductance required for power delivery
INDUCTANCE_TYP	3300		3300	uH	Typical design inductance required for power delivery
INDUCTANCE_MAX			3630	uH	Maximum design inductance required for power delivery
TOLERANCE_INDUCTANCE			10	%	Tolerance of the design inductance
FACTOR_LOSS			0.85		Factor that accounts for "off-state" power loss to be supplied by inductor
IRMS_INDUCTOR			0.063	A	Inductor RMS current
<b>FREEWHEELING DIODE PARAMETERS</b>					
VF_FREEWHEELING			0.70	volts DC	Forward voltage drop of the freewheeling

					diode
PIV		600	volts DC		Peak inverse voltage rating of the freewheeling diode
IRMS_DIODE		0.061	A		Diode RMS current
TRR		<75	ns		Required reverse recovery time of the selected diode
<b>BIAS/FEEDBACK PARAMETERS</b>					
VF_BIAS		0.70	volts DC		Forward voltage drop of the bias diode
RBIAS		2490	Ohms		Bias resistor
RBP		1.0	uF		BP pin capacitor
RFB		3480	Ohms		Feedback resistor
CFB		10	uF		Feedback capacitor
C_SOFTSTART			uF		No soft-start capacitor required

## 9 Waveforms

### 9.1 Output Voltage Ripple

For DC output ripple measurements, a modified oscilloscope test probe must be utilized in order to reduce spurious signals due to pick-up. Details of the probe modification are provided in the Figures below.

The 4987BA probe adapter is affixed with two capacitors tied in parallel across the probe tip. The capacitors include one (1) 0.1  $\mu\text{F}$ /50 V ceramic type and one (1) 1  $\mu\text{F}$ /50 V aluminum electrolytic. The aluminum electrolytic type capacitor is polarized, so proper polarity across DC outputs must be maintained (see below).

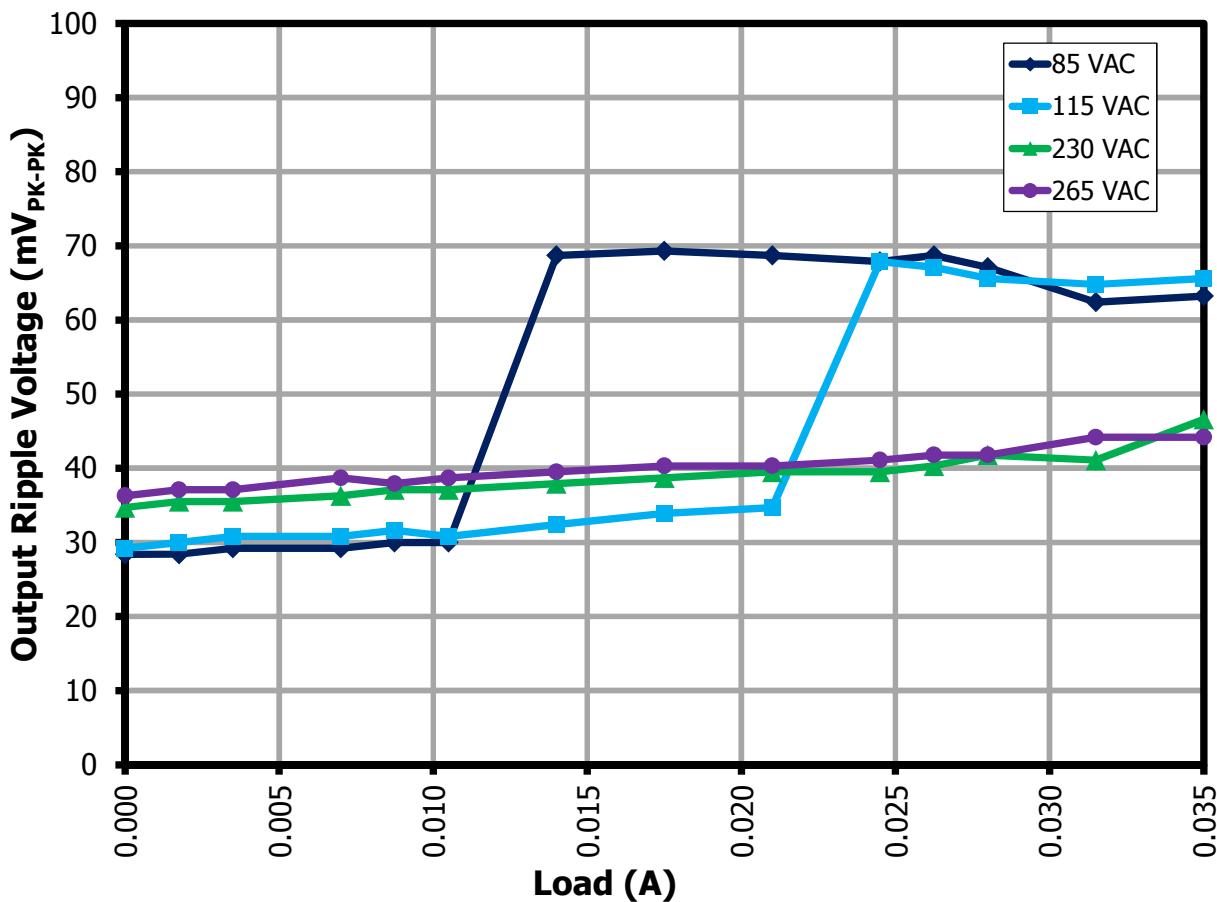

**Figure 11** – Oscilloscope Probe Prepared for Ripple Measurement. (End Cap and Ground Lead Removed)

**Figure 12** – Oscilloscope Probe with Probe Master ([www.probemaster.com](http://www.probemaster.com)) 4987A BNC Adapter.  
(Modified with wires for ripple measurement, and two parallel decoupling capacitors added)

### 9.1.1 Measurement Results
